

Office Automation, End to End

Editable outputs. Native fidelity. Auditable execution.

One runtime, three desktop applications

3
desktop apps

5
PowerPoint
capabilities

3
Word capabilities

3
Excel capabilities

1
versioned protocol

11
semantic layouts

Dry-run
before write

SHA-256
every artefact

1
writer per sidecar

Contract-first execution path

1

MCP client | task-level tools

2

Rust server | live capability filtering

3

C# host | STA plus policy gate

4

Desktop app | native COM renderer

5

Artifact | inspect plus audit plus hash

Use each backend for what it proves

Open XML

- ✓ Office-free deterministic compile
- ✓ Editable OOXML packages
- ✓ Fast structural work

Desktop COM

- ✓ Native PowerPoint rendering
- ✓ PDF export and previews
- ✓ Overflow and readback checks

A verified document workflow

2025年度 release language is still present

- The replacement showcase first discovers this marker with dry-run.
- An unconfirmed write is refused.
- A confirmed write creates a byte-exact checkpoint.
- A second dry-run proves 2026年度 is present.

Built for agents. Verified by Office.

PowerPoint, Word and Excel through one governed automation contract.
